PROFILE

Electronics engineer (MSc, KU Leuven) with hands-on experience in hardware R&D, multi-layer PCB design, BOM management, test documentation and production support for industrial electronics. Available immediately for full-time engineering roles in Belgium.

EXPERIENCE

TMC Belgium — **Belgium**
Engineering Consultant — *Sep 2024 – Oct 2026*

Televic Conference (client assignment) — **Izegem, Belgium**
Customization Engineer – Hardware R&D — *May 2025 – Jun 2026*

- Owned hardware R&D for custom-built units, running feasibility checks on modular electronic and mechanical building blocks to ensure manufacturability.
- Defined complete unit configurations and built accurate BOMs covering electronics, mechanics and fasteners for production release.
- Prepared and released production-ready documentation, including mounting instructions, test procedures and customer installation guides, supporting consistent assembly and testing.
- Served as first-line production support for urgent custom orders, resolving issues under high time pressure to avoid production delays.

Lynqo Project — **Zaventem, Belgium**
Hardware Engineer — *Nov 2024 – Jan 2025*

- Designed an LED lighting system for AI-assisted object detection, optimizing brightness distribution in a detection box.
- Developed a hardware control circuit integrating a MOSFET, LDR and ADC that dynamically adjusts lighting intensity to ambient conditions, ensuring consistent detection performance.

Watt4ever — **Beringen, Belgium**
PCB Design Engineer (part-time) — *Nov 2023 – Dec 2023*

- Reverse-engineered BMS-related PCBs to map system functionality and signal flow, and recreated complete schematics in Altium Designer.
- Redesigned the PCB layout with improved documentation and layout optimization, enabling reliable in-house manufacturing and easier future modifications.

EDUCATION

KU Leuven — **Leuven, Belgium**
Master of Electronics and ICT – Specialization: Intelligent Electronics — *Sep 2022 – Sep 2024*

- Master's thesis at imec (Sep 2023 – Jun 2024): Magnetic Localization of Ingestible Devices. Developed and optimized a Python-based position and orientation algorithm and validated a new ingestible device prototype with improved localization accuracy.

KU Leuven — **Leuven, Belgium**
Bachelor of Engineering Technology – Specialization: Electronics and ICT — *Sep 2019 – Jun 2024*

LEADERSHIP & ACTIVITIES

Formula Electric Belgium — **Leuven, Belgium**
Volunteer Electronics Engineer (part-time) — *Oct 2022 – Nov 2022*

- Drew detailed electronic schematics in Altium Designer that the team used as the basis for its PCB design.
- Built a comprehensive understanding of SPI and CAN protocols used in automotive electronics.

SKILLS, CERTIFICATIONS & LANGUAGES

Engineering: Hardware R&D, multi-layer PCB design, electronics, power electronics, BOM management, testing & validation, production support, technical documentation

Tools: Altium Designer, Autodesk Eagle, MATLAB, Python, NI LabVIEW, SolidWorks

Certifications: Lean Six Sigma Yellow Belt

Languages: Azerbaijani, English, Russian, Turkish, Dutch (A2)
