## Experience:

### TMC Belgium
*Belgium, Sep 2024 – Oct 2026*

*Engineering Consultant*

**Televic Conference | TMC Belgium assignment**

*Customization Engineer – Hardware R&D* *Izegem, Belgium, May 2025 – Jun 2026*

- Acted as hardware R&D owner for custom-built units, performing feasibility checks based on modular electronic and mechanical building blocks and ensuring manufacturability.
- Defined complete unit configurations and created accurate BOMs covering electronics, mechanics, and fasteners for production release.
- Prepared and released production-ready documentation including mounting instructions, test procedures, and customer installation guides, supporting consistent assembly and testing.
- Served as first-line production support for urgent custom orders, resolving issues under high time pressure to avoid production delays.

**Lynqo Project**

*Hardware Engineer* *Zaventem, Belgium, Nov 2024 – Jan 2025*

- Designed an LED lighting system for AI-assisted object detection to optimize brightness distribution in a detection box.
- Developed a hardware control circuit integrating a MOSFET, LDR, and ADC to adjust lighting intensity based on ambient conditions dynamically, ensuring consistent detection performance.

### IMEC
*Master's Thesis: Magnetic Localization of Ingestible Devices* *Leuven, Belgium, Sep 2023 – Jun 2024*

- Developed and optimized a Python-based Position & Orientation algorithm for magnetic localization.
- Validated a new ingestible device prototype with improved localization accuracy.

### Watt4ever
*PCB Design Engineer, part-time* *Beringen, Belgium, Nov 2023 – Dec 2023*

- Reverse-engineered BMS-related PCBs to understand system functionality and signal flow, and recreated complete schematics in Altium Designer.
- Redesigned the PCB layout with improved documentation and layout optimization, enabling reliable in-house manufacturing and easier future modifications.

### Formula Electric Belgium
*Volunteer Electronics Engineer, part-time* *Leuven, Belgium, Oct 2022 – Nov 2022*

- Gained a comprehensive understanding of SPI and CAN protocols, key in automotive electronics.
- Drew detailed electronic schematics with Altium Designer, enabling the team to base their PCB design on it.

## Education:

**KU Leuven**

*Master of Electronics and ICT* *Sep 2022 – Sep 2024*

- Specialization: Intelligent Electronics

**KU Leuven**

*Bachelor of Engineering Technology* *Sep 2019 – Jun 2024*

- Specialization: Electronics and ICT

## Skills:

- **Engineering:** Hardware R&D, Multi-layer PCB Design, Electronics, Power Electronics, BOM Management, Testing & Validation, Production Support, Technical Documentation, Lean Six Sigma Yellow Belt
- **Tools:** Altium Designer, Autodesk Eagle, MATLAB, Python, NI LabVIEW, SolidWorks
- **Languages:** Azerbaijani, English, Russian, Turkish, Dutch (A2)
